

“Job Time Entry” for Dynamics NAV 2009

Your Job Data is always current and accurate

Written in and developed for NAV 2009

Works with base Jobs Granule or “Job Manager”

NAV does not have to be installed on your PC. (DCO License)

Easy Installation and Setup

Job Time with Clock In/ Clock Out

Service Time with direct Elapsed Time Entry (PSO)

“Job Time Entry” is a special entry screen for employees to enter their Job Time per Task. Once “Approved” the time moves to the Job Journal for regular Posting to the Job Ledger Entries.

After an employee enters or scans their name, the system displays the Job and Task he is currently “Clocked in to”. The employee could “Clock In” to a different Task, view his completed entries, Clear the Screen, or Clock Out of the “Electrical” Task by just Clocking In to another Job/Task.

All of the completed punches are stored in an approval table for review and manager’s approval. Upon approval they are moved to the Job Journal for posting.
